👤 PROFILE

Motivated and enthusiastic Software Engineering student currently in the second semester of studies, seeking an internship opportunity in a dynamic software house. Eager to apply foundational knowledge in programming, problem-solving, and software development, while gaining hands-on experience in real-world projects. Quick learner with a strong interest in learning new technologies and contributing to team success.

📁 CAREER OBJECTIVE

As a Third-semester Software Engineering student, I am developing a strong foundation in programming and software development. Although I do not have formal work experience, I have applied my knowledge through academic assignments and personal projects.

I am proficient in C++, with a strong grasp of Object-Oriented Programming (OOP) principles such as classes, inheritance, encapsulation, and polymorphism. I've built several console-based applications using these concepts, which helped me write modular and maintainable code.

In web development, I have hands-on experience with HTML and CSS, Javascript, React Js, Tailwind creating responsive and visually appealing static web pages. I'm currently learning JavaScript to build more interactive and dynamic websites.

My projects include a simple student record management system developed in C++, which helped reinforce my understanding of Object-Oriented Programming concepts. Working on this project taught me how to approach problem-solving, break down tasks, and plan development steps. It also gave me experience in working independently to complete a project from start to finish.

I am a motivated learner, eager to gain real-world experience in a professional software development environment. I'm looking forward to joining a software house as an intern, where I can contribute to meaningful projects while continuing to grow my skills.
